STEEL SIDE DUMP

STANDARD FEATURES

Two-Piece Rolled Tub

The abrasion-resistant tub is constructed of two rolled pieces of 6mm Hardox 450. The round bottom delivers fast, clean dumping of the load away from the trailer, with no "carry back". The fewer weld seams, minimizes likelihood of cracking. This tub design results in weight savings.

5" Cylinders

5" bore, single-stage cylinders offer a smooth, fast dump cycle for faster cycle times. The single-stage cylinders are low maintenance. Two-pin mounting makes them easily removable if they need to be repaired or replaced.

One-Piece Fabricated I-Beam

Trail King I-beams are constructed of one-piece web and flange material. The result is a mainframe that is stronger, with less twisting and a significant improvement in stability.

Increased Stability

An additional center tub pivot provides a smoother dumping process with no wheel hop at the end of the dump cycle while maintaining a dump angle of 41 degrees.

Plastic Rounded Fenders

Rugged, flexible, impact-absorbent plastic rounded fenders (front and rear) shed falling debris to protect both the trailer and wheels. Improved tarp and truck fender clearance increases durability.

Control Kit

Trail King Side Dump trailers come standard with a trailer-mounted cab control kit. Consistent componentry makes maintenance easy between models and ensures long-term commitment.

TRAIL KING STEEL SIDE DUMP

DESIGNED TO PERFORM ENGINEERED TO LAST.

The two-piece rolled design of Trail King's Steel Side Dump tub delivers a fast, stable unloading process ensuring materials are dumped further away and eliminating carry back. Main frame I-beams constructed of one-piece web and flange material, result in a trailer with the rugged strength and durability to stand up to your toughest loads. There is no limit to what this trailer can haul.

Popular Options

- Electric tarp systems
- Additional light packages
- Tarp safety switch
- Pintle Hitch

Removable Kingpin

Standard drop-in removable kingpin, greaseless bushings, remote cylinder grease lines and bolt-on parts provide ease of maintenance.

Tub Pivots

Feature an extended alignment guide so the pivot bushing returns to sit perfectly in the pivot saddle. The larger bearing surfaces reduce wear and provide full contact with the pivot bar for a stronger, more secure lock down. All pivot points are mounted on full-width I-beam cross members for the most load-bearing strength.

New Tub Geometry

Drastically increases tub to truck clearance when dumping. Improves cycle stability, and provides better rear-view visibility and component protection.

STRONG & STABLE
